#### LEARNING OUTCOMES

#### Learning Outcomes

The course learning outcomes, specific knowledge, skills and competences of an appropriate (certain) level, which students will acquire upon successful completion of the course, are described in detail.

It is necessary to consult:

#### APPENDIX A

• Description of the level of learning outcomes for each level of study, in accordance with the European Higher Education Qualifications' Framework.

• Descriptive indicators for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and

### APPENDIX B

• Guidelines for writing Learning Outcomes

After completing this course, students will have:

- Familiarized themselves with and comprehended concepts related to Food Science and Technology
- Learned the general principles that govern Food Science and Technology
- Comprehended the origin, composition, and nutrients of food and the nutritional value of distinct categories of food
- Learned the basic principles of food processing and preservation
- Familiarized themselves with packaging form, the role of additives, comprehended the basic rules of hygiene and safety in production plants, and the rules of transport and storage
- Exposed themselves to issues related to global food demand, available food supply, and contemporary problems of food sufficiency and quality

### **General Competences**

| Taking into consideration the general comp   | etences that students/graduates must acquire (as those are described in   |  |  |  |  |
|--|---|--|--|--|--|
| the Diploma Supplement and are mentioned below), at which of the following does the course attendance aim? |   |  |  |  |  |
| Search for, analysis and synthesis of data   | Project planning and management   |  |  |  |  |
| and information by the use of appropriate  | Respect for diversity and multiculturalism                                |  |  |  |  |
| technologies,  | Environmental awareness   |  |  |  |  |
| Adapting to new situations   | Social, professional and ethical responsibility and sensitivity to gender |  |  |  |  |
| Decision-making  | issues  |  |  |  |  |
| Individual/Independent work  | Critical thinking   |  |  |  |  |
| Group/Team work  | Development of free, creative and inductive thinking                      |  |  |  |  |
| Working in an international environment  |   |  |  |  |  |
| Working in an interdisciplinary  | (Othercitizenship, spiritual freedom, social awareness, altruism etc.)    |  |  |  |  |
| environment  |   |  |  |  |  |
|  |   |  |  |  |  |

Introduction of innovative research

- Researching, analyzing, and synthesizing data and information with the use of suitable technologies
- Working autonomously
- Promoting free, creative, and deductive reasoning

#### COURSE CONTENT

- 1. Definitions and general concepts in Food Science and Technology. The food industry.
- 2. Composition, nutrients and nutritional value of food.
- 3. Carbohydrates (stereochemistry, chemical and physical properties, structural and storage polysaccharides).
- 4. Proteins (structure, role, physical and chemical properties).
- 5. Fats and oils (chemical structure, chemical and physical properties, fatty acids in food).
- 6. Water (water in food, chemical structure, chemical and physical properties).
- 7. Minerals (macronutrients, micronutrients and their role).
- 8. Vitamins and food additives (antioxidants, preservatives, colorings).
- 9. Contemporary challenges of the agri-food and food sector.
- 10. Origin and categories of food.
- 11. Hygiene and food safety, spoilage, sources of contamination (effects of microorganisms on food, desirable and undesirable changes, toxins).

- 12. Principles of food processing, preservation and packaging (principles of heating, cooling, freezing, condensation/drying).
- 13. Qualitative and sensory evaluation of food.
