

Automatically send authentication data to your centralized analysis tool

Reporting API

Incorporate OpenAthens usage data with your other sources of information. The OpenAthens Reporting API surfaces data for easy use in third-party analysis tools such as Tableau, Google Analytics, Power BI, and other data visualization software.

The Reporting API provides automated access to data so it can be easily shared with administrators who do not have access to the OpenAthens administrative tool.

Usage data available:

- Resources
- Groups
- Permission sets
- Custom attributes made reportable via the schema editor

Frequencies:

- Hourly
- Daily
- Monthly

Format:

- CSV (comma-separated values) file

Answer key questions with data, like...

How does library resource usage impact academic success?

Combine OpenAthens resource usage data with data stored in other systems, such as success metrics like Grade Point Average or institutional metrics like Academic Major.

Contact your EBSCO representative for more information and pricing.
