

Open Access Management Made Easy

Oable is an open access management software solution that empowers institutions with the tools to unify publisher workflows and streamline management operations such as publisher agreements, payments, researcher funding requests, and reporting.

Who will benefit from Oable

Whether your institution has a **Transformational Agreement** with any publisher or if you manage an **OA fund or APC requests from researchers**, this service simplifies the management of open access workflows.

What you can expect from Oable

Optimized Transformational Agreement Workflow: Oable is a workflow with one dashboard to manage your TAs across publishers, including approval, payment and reporting processes.

Efficient APC Management of Individual Articles with an OA Fund: Oable centralizes APC payments to any publisher, while managing approvals. It delivers a holistic view of OA spending across campus by managing APC payments traditionally fulfilled outside the library.

Unified System Approach: Oable streamlines and can automate workflows across publishers by unifying data to empower informed decision making.

Open Access Specialization: Developed with input from librarians from institutions across the world, Oable technology transforms and connects open access workflows between institutions, publishers, authors and researchers.

Trusted Support and Continuous Improvement: The Oable team is a partner with shared objectives, acting in the best interest of customers, and including them in conversations about system innovations. Support is offered through dedicated customer success managers.
