Fundamental questions
Elemental answers

An open access forum for new food technologies

What can we do to ensure food security around the globe? How do we end world hunger? Where can we find the solutions to produce food more sustainably?

Sustainable Food Technology seeks the answers to these big questions. While our companion journal, *Food & Function*, focuses on the purpose of food and its relation to health and nutrition, this new journal publishes high quality sustainable research on food engineering and technologies. Key topics include food preservation methods, shelf life and the creation of greener packaging.

We want your research to be easily accessible and beneficial to people globally. That's why *Sustainable Food Technology* is gold open access with all article processing charges (APCs) paid by us until mid-2025 – so initially you can publish for free. We're committed to increasing the visibility of your articles and making a difference around the world.

Editor-in-Chief

Jorge Barros Velázquez University of Santiago de Compostela, Spain

Gold open access with all APCs waived until mid-2025.
