

Information Day

Smart digital applications and tools for the effective promotion and enhancement of the Ionian Islands bio-diversity

Ionian University invites all interested parties to participate in the **Info Day** of the **ERMIS** project, which will take place on **December 18, 2021 at 10:00a.m.** as a **fully virtual online event**. ERMIS project, fully entitled "Smart digital applications and tools for the effective promotion and enhancement of the Ionian Islands bio-diversity" is co-funded by the European Union and implemented under the Operational Program "Ionian Islands 2014-2020".

The main actions of the ERMIS project include the creation of a digital platform-umbrella for a bouquet of digital services, tools and applications that are available on the Internet and highlight the biodiversity of the Ionian Islands. As part of the project, an easy-to-use digital database has been created, in which both scientists and the general public may contribute and search for information on all species of fauna and flora found in the wider geographical area of the Ionian Sea, where the actions of the ERMIS project are located.

In this context, the digital portal of the project is a fundamental tool for the implementation of its actions, including its economic and social aspects, while it can also be considered as a reservoir of connections for the main activities and actions that take place throughout its duration.

All activities carried out within the ERMIS project include relevant multimedia content, which is published and is available on the project's digital portal. More information is available on the platform's website <https://ermis.di.ionio.gr/>

Online event is available at: <https://bit.ly/3s86cdX>
